**List of Program Elective Course- I**

|                               |                                     |
|-------------------------------|-------------------------------------|
| Advanced Prestressed Concrete | Design of Pre-Engineered Buildings  |
| Design of Tall Buildings      | Theory of Elasticity and Plasticity |

**Abbreviations:**

ISE 1:-In semester evaluation 1, ISE 2:- In semester evaluation 2, MSE: - Mid Semester Examination, ESE: - End Semester Examination. \*Passing Criteria:- ISE + MSE + ESE  $\geq$  40 % Marks and ESE has separate passing  $\geq$  40 % Marks.

| <b>CO 6</b> Prepare professional research reports and proposals.                                    | <b>6</b>  |                           |                             |                           |

### Course Content

| Unit No. | Contents  | Hrs. |
|----------|---|------|
| Unit 1   | <b>Introduction to Research and Its Significance</b><br>Meaning, objectives, and importance of research, Research types: Fundamental, Applied, Analytical, Experimental, and Interdisciplinary, Research process, characteristics, and scope in civil/structural engineering, Recent trends in structural engineering research (sustainability, materials, resilience).     | 6    |
| Unit 2   | <b>Research Problem Identification and Literature Review</b><br>Identifying and formulating research problems, Defining objectives, hypothesis, and scope, Sources of problems: field issues, industrial challenges, academic gaps, Literature survey: process, tools, and databases (Scopus, Web of Science, ASCE), Use of reference managers (Mendeley, Zotero, EndNote). | 6    |
| Unit 3   | <b>Research Design, Data Collection and Analysis</b><br>Research design: concepts, types, and applications, Data collection: primary and secondary sources, Sampling methods, reliability, and validity, Statistical analysis: descriptive statistics, correlation, regression, hypothesis testing, Use of analysis tools (Excel, SPSS, MATLAB).                            |      |

Curriculum Structure and Evaluation Scheme

(2025-27 Batch)

|                    |  |           |
|--------------------|--|-----------|
| <b>Unit 4</b>      | <b>Intellectual Property Rights (IPR) and Patents</b><br>Introduction to IPR and its significance, Types: Patents, Copyrights, Trademarks, Industrial Designs, Trade Secrets, Patent structure and filing procedure (India & International), Case studies: Patents in concrete technology and smart structures, Technology transfer, commercialization, and innovation management. | <b>6</b>  |
| <b>Unit 5</b>      | <b>Research Ethics, Plagiarism and Publication Practices</b><br>Ethics in research: honesty, transparency, accountability, Fabrication, falsification, plagiarism: definitions and consequences, Plagiarism detection software (Turnitin, Urkund), Publication ethics: predatory journals, peer review, impact factor, authorship criteria, Case studies on ethical misconduct.    | <b>6</b>  |
| <b>Unit 6</b>      | <b>Research Documentation, Proposal and Report Writing</b><br>Research proposal components: title, objectives, methodology, timeline, budget; Technical paper writing: structure, formatting, referencing (APA, IEEE); Dissertation / Thesis writing structure and presentation; Seminar, defence, and publication preparation.  | <b>6</b>  |
| <b>Total Hours</b> |  | <b>36</b> |

**List of Tutorials**

| <b>Tutorial No.</b> | <b>Title</b>  | <b>Hrs.</b> |
|---------------------|---|-------------|
| 1                   | Discussion on real-life structural engineering problems; review of recent journal articles (ASCE / Elsevier).     | 1           |
| 2                   | Group mapping of research stages from topic identification to report writing; flowchart preparation.              | 1           |
| 3                   | Identify a topic, write problem statement, objectives, and hypothesis. Peer review for clarity.                   | 1           |
| 4                   | Practical session on use of Google Scholar, Scopus; citation management using Mendeley/Zotero.                    | 1           |
| 5                   | Choose one problem and define research design, variables, and   | 1           |
| 6                   | Hands-on analysis using Excel/SPSS — correlation, regression,   | 1           |
| 7                   | Select one published experimental study (e.g., concrete mix, beam test) and interpret data trends.                | 1           |
| 8                   | Discuss types of IPR and identify examples related to civil engineering   | 1           |
| 9                   | Each student prepares a one-page abstract for a hypothetical patent on an innovative structural material/product. | 1           |
| 10                  | Analyze a given report with plagiarized text; check similarity using Turnitin/Urkund (demonstration).             | 1           |

**Course Outcomes (COs):** - Upon successful completion of this course, the student will be able to:

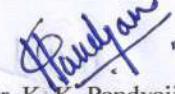

BL

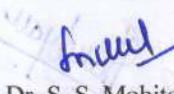

|     |   |   |
|-----|---|---|
| CO1 | Analyze the PSC member for flexural, shear strength and deflection.                     | 4 |
| CO2 | Analyze and design of the anchor blocks.  | 5 |
| CO3 | Design the simple and indeterminate structures like continuous beams and portal frames. | 6 |
| CO4 | Analyze and design composite section and various slabs.                                 | 5 |
| CO5 | Design various special types of PSC structures like pipes, poles, tanks, sleepers.      | 6 |
| CO6 | Understand the causes of various defects in PSC structure and remedies for it.          | 2 |

### Course Content

| Unit No. | Contents   | Hrs. |
|----------|--|------|
| Unit 1   | <b>Introduction to Pre-stressed Concrete:</b> Basic Principle of Pre-stressing, Methods and Systems of Pre-stressing, Material Requirements, Losses of Pre-stressing, Analysis of Rectangular, Symmetrical and Unsymmetrical, Flanged Beams, Concept of Cable Profile, Pressure Line, Thrust Lines, etc.   | 6    |
| Unit 2   | <b>Analysis and Design of PSC Members:</b> Analysis of PSC section for Flexural Strength, Shear Strength and Deflection, Design of Pre-stressed Concrete section for Flexural Strength by Analytical procedure and Magnet's Graphical method, Shear Strength and Deflection, Design of Statically Indeterminate Beams, Concordant Cable Profile. | 8    |

### Design of Tall Building

| Course Code and Course Title     | OCEPEC505<br>Design of Tall Building                  |                 |                 |
|----------------------------------|---|-----------------|-----------------|
| Semester                         | I   |                 |                 |
| Prerequisites                    | Analysis and Design of Reinforced concrete structures |                 |                 |
| Teaching Scheme (hours per week) | Lecture<br>3  | Tutorial<br>-   | Practical<br>-  |
| Credit                           | 03  |                 |                 |
| Evaluation Scheme                | ISE 1<br>10 Marks                                     | MSE<br>20 Marks | ESE<br>10 Marks |
|                                  |   |                 | 60 Marks        |

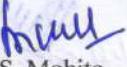

**Course Outcomes (COs):** -Upon successful completion of this course, the student will able to: BL

|            |   |          |
|------------|---|----------|
| <b>CO1</b> | The students will understand fundamental concept, design philosophy of high-rise structure.             | <b>2</b> |
| <b>CO2</b> | Construct SFD and BMD in building frame by approximate analysis method.                                 | <b>4</b> |
| <b>CO3</b> | Design RC shear wall and chimney.   | <b>6</b> |
| <b>CO4</b> | Analyze, design and detail Transmission/ TV tower, Mast and Trestles with different loading conditions. | <b>4</b> |

| Course Content     | Contents   | Hrs.      |
|--------------------|--|-----------|
| <b>Unit No.</b>    |  |           |
| <b>Unit 1</b>      | <b>Introduction to Tall Buildings:</b> Tall buildings – Design process, Philosophy, Scope and design criteria – design philosophy, Strength and stability, Stiffness, Creep and temperature effects, Fire loading, gravity, Wind, earthquake and combine loading.  | <b>6</b>  |
| <b>Unit 2</b>      | <b>Analysis of Multistorey Building Frames: I:</b> Analysis of Multistorey Building Frames for lateral loads by Cantilever method and Portal method.   | <b>6</b>  |
| <b>Unit 3</b>      | <b>Analysis of Multistorey Building Frames: II:</b> Analysis of Multistorey Building Frames for lateral loads by Factor method and Substitute Frame Method.  | <b>6</b>  |
| <b>Unit 4</b>      | <b>Design of RCC Chimney:</b> Introduction, Wind pressure, Stress in chimney shaft due to self-weight and wind, Stress in horizontal reinforcement due to wind shear, Stresses due to temperature difference, Design of RC chimney.  | <b>6</b>  |
| <b>Unit 5</b>      | <b>Design of Shear Wall:</b> Introduction, Types of shear walls, Behaviour of cantilever wall with rectangular cross-section, flange cantilever shear walls, Moment-Axial load interaction for shear wall section, Interaction of shear walls and rigid joined frames, Shear walls with openings, Coupled shear walls. | <b>6</b>  |
| <b>Unit 6</b>      | <b>Cooling &amp; Transmission Towers:</b> Types, Components, Analysis and Design. Types of Loads, Tower Configuration, Analysis and Design.  | <b>6</b>  |
| <b>Total Hours</b> |  | <b>36</b> |

| Credit                           | 03  |                 |                  |             |
| Evaluation Scheme                | <b>ISE 1</b>                                      | <b>MSE</b>      | <b>ISE 2</b>     | <b>ESE</b>  |
|                                  | 10<br>Marks                                       | 20<br>Marks     | 10<br>Marks      | 60<br>Marks |

**Course Outcomes (COs):** - Upon successful completion of this course, the student will be able to: BL

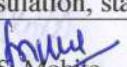

|            |  |   |
|------------|--|---|
| <b>CO1</b> | Understand the various components of pre-engineered structures   | 2 |
| <b>CO2</b> | To Analyze the different types of stresses acting on the structures while lifting the prefabricated structures and type of equipment required to support such stresses | 3 |
| <b>CO3</b> | Apply the latest Pre-Engineered Buildings equipment technique in the construction industry   | 5 |
| <b>CO4</b> | Application of Pre-engineered structure in various sectors of building industry  | 4 |
| <b>CO5</b> | Design of Pre-engineered structure   | 5 |

### Course Content

| Unit No.      | Contents  | Hrs. |
|---------------|---|------|
| <b>Unit 1</b> | <b>Introduction:</b> -<br>Pre- engineered building's introduction, history, advantage of PEB, application of PB, materials used for manufacturing of PB, difference between conventional Steel buildings and pre-engineered buildings.  | 6    |
| <b>Unit 2</b> | <b>Pre- Engineering buildings components:</b> -<br>Primary system main frames cable and frame, secondary frame system, size and properties of Berlin and gears, bracing system and cladding, Roof sheeting and wall seating accessories, Turbo ventilators, ridge vents, skylights, louvers insulation, staircases. | 7    |

**Course Outcomes (COs):** -Upon successful completion of this course, the student will able to:

**BL**

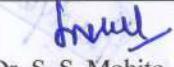

|            |   |          |
|------------|---|----------|
| <b>CO1</b> | Analyze stress and strain at a point in 3D, derive equilibrium and compatibility equations.       | <b>4</b> |
| <b>CO2</b> | Apply generalized Hooke's law and Airy's stress function to solve plane stress/strain problems.   | <b>3</b> |
| <b>CO3</b> | Solve classical problems in elasticity including stress concentration and axisymmetric problems.  | <b>3</b> |
| <b>CO4</b> | Analyze members under torsion using St. Venant's theory, membrane analogy, and energy principles. | <b>4</b> |
| <b>CO5</b> | Evaluate plastic behavior, yield criteria, and plastic deformation in structural members.         | <b>5</b> |

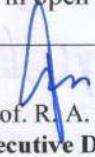

### Course Content

| Unit No.      | Contents   | Hrs.     |
|---------------|--|----------|
| <b>Unit 1</b> | <b>Module 1: Analysis of Stress and Strain</b><br>Concept of stress at a point, stress tensor, principal stresses, Mohr's circle, strain displacement, strain compatibility, Navier-Lame's equations, Beltrami-Michell equations, boundary value problems. | <b>7</b> |
| <b>Unit 2</b> | <b>Module 2: Stress-Strain Relationship</b><br>Generalized Hooke's law for isotropic and orthotropic materials, Plane stress/strain, Airy's stress function, bending of beams, and shear centre in open sections.  | <b>7</b> |

|            |   |          |
|------------|---|----------|
| <b>CO1</b> | Design and prepare high-performance, self-compacting, and fiber-reinforced concretes.   | <b>3</b> |
| <b>CO2</b> | Experimentally evaluate mechanical and durability properties of modern concretes.       | <b>4</b> |
| <b>CO3</b> | Conduct and interpret results from NDT and microstructural tests on advanced materials. | <b>5</b> |
| <b>CO4</b> | Assess sustainable and green concrete using industrial by-products and waste materials. | <b>4</b> |
| <b>CO5</b> | Develop experimental reports and recommendations for innovative construction materials. | <b>6</b> |

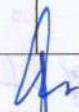

**Experiment List (Any 7 performance are compulsory)**

| Expt. No. | Title   | Duration in Hrs |
|-----------|---|-----------------|
| 1         | Mix design and preparation of High-Performance Concrete (HPC) as per IS 10262.                    | 2               |
| 2         | Workability tests (slump, flow table, compaction factor) and compressive strength testing of HPC. | 2               |
| 3         | Design and testing of Self-Compacting Concrete (SCC) – Slump flow, L-box, U-box tests.            | 2               |
| 4         | Preparation and testing of Fiber Reinforced Concrete (FRC) for flexural and tensile behavior.     | 2               |
| 5         | Study of Polymer Modified or Nano-Modified Concrete – preparation and durability testing.         | 2               |
| 6         | Geopolymer Concrete preparation using fly ash or GGBS – evaluation of strength and setting time.  | 2               |
| 7         | Non-Destructive Testing (NDT) – Rebound Hammer, Ultrasonic Pulse Velocity (UPV).                  | 2               |

**Course Outcomes (COs):** - Upon successful completion of this course, the student will be able to:

|            |   |          |
|------------|---|----------|
| <b>CO1</b> | Analyze RCC structural systems (building, retaining wall, flat slab, foundations, etc.) using structural design software as per IS 456:2000 and relevant codes. | <b>3</b> |
| <b>CO2</b> | Design RCC structural elements and foundations using software and validate results with manual checks.  | <b>4</b> |
| <b>CO3</b> | Prepare reinforcement detailing drawings, interpret results, and compile a professional design report.  | <b>6</b> |

### Course Content

| <b>Unit No.</b> | <b>Contents</b>  | <b>Hrs.</b> |
|-----------------|--|-------------|
| <b>1</b>        | <b>Activity 1: Analysis of RCC Structures using Software</b><br>• Introduction to RCC analysis software (STAAD.Pro / ETABS / SAP2000/SAFE).<br>• Modeling and analysis of one of the following structures:<br>– Multi-storey RCC building frame<br>– RCC retaining wall<br>– Flat slab system<br>– RCC isolated / combined / raft foundation<br>• Application of loads (DL, LL, WL, Earth pressure) as per IS 875 and IS 1893.<br>• Extraction and interpretation of analysis results (bending moments, shear forces, reactions, deflections).<br>• Validation of software results through theoretical comparison.<br>Deliverables: Model file, load application sheet, and analysis report (member forces & deflection summary) | <b>14</b>   |

**Course Outcomes (COs):** -Upon successful completion of this course, the student will able to: BL

|            |  |   |
|------------|--|---|
| <b>CO1</b> | Design flat slab and grid slab.  | 6 |
| <b>CO2</b> | Design R.C.C. Deep beams.  | 6 |
| <b>CO3</b> | Design R.C.C. elevated service reservoir and retaining wall.   | 6 |
| <b>CO4</b> | Analyse and design combined footing, raft foundation & pile foundation.  | 6 |
| <b>CO5</b> | Design bunkers and silos using Airy's theory to ensure structural stability and safe load-bearing performance. | 6 |

**Course Content**

| Unit No.           | Contents   | Hrs.      |
|--------------------|--|-----------|
| <b>Unit 1</b>      | <b>Flat Slab and Grid Slab</b><br>Classification, Behaviour of Flat slabs, Direct design and equivalent frame method, IS codal provisions, Analysis and design of grid Slab.                   | 6         |
| <b>Unit 2</b>      | <b>Deep Beams</b><br>Introduction, Minimum thickness, Analysis and Design of deep beams as per IS 456-2000, Checking for local failures, Detailing of deep beams.                              | 6         |
| <b>Unit 3</b>      | <b>Water Tanks</b><br>Introduction to working stress method for water tank design, Design criteria, permissible stresses, Analysis and design of overhead water tank – Rectangular & circular. | 6         |
| <b>Unit 4</b>      | <b>Design of Foundation</b><br>Analysis and design of combined footing, raft foundation & pile foundation.   | 6         |
| <b>Unit 5</b>      | <b>Retaining wall</b><br>Function, Theories of earth pressure, Stability of retaining wall. Analysis and Design of cantilever retaining walls and counter-fort retaining walls.                | 6         |
| <b>Unit 6</b>      | <b>Bunker and silos</b><br>Classification, Design of Square and circular bunkers. Silos, Airy's theory, Design of shallow bins and deep bins.  | 6         |
| <b>Total Hours</b> |  | <b>36</b> |

|   | 10<br>Marks   | 20<br>Marks   | 10<br>Marks | 60<br>Marks |      |
| <b>Course Outcomes (COs):</b> - Upon successful completion of this course, the student will be able to: |   |   |             |             | BL   |
| CO1   | Apply knowledge of structural behavior and codal provisions to plan industrial structures efficiently.  |   |             |             | 3    |
| CO2   | Analyze thin-walled/cold-formed steel members for buckling, compression, and tension.   |   |             |             | 4    |
| CO3   | Analyze RC bunkers, silos, and chimneys under self-weight, wind, and temperature effects.   |   |             |             | 4    |
| CO4   | Evaluate design solutions for cylindrical shells and complex industrial components.   |   |             |             | 5    |
| CO5   | Create safe and optimized designs of industrial structures using advanced design principles and structural detailing.   |   |             |             | 6    |
| <b>Course Content</b>   |   |   |             |             |      |
| Unit No.  | Contents  |   |             |             | Hrs. |
| Unit 1  | <b>Planning of Industrial Structures:</b> Covers types and components of industrial structures, layout planning, bracings, and design principles of steel industrial buildings.                                     |   |             |             | 6    |
| Unit 2  | <b>Cold-Formed / Thin-Walled Steel Members:</b> Focuses on local and post-buckling behavior, light-gauge columns and compression members, stiffened elements, effective length considerations, and tension members. |   |             |             | 6    |
| Unit 3  | <b>RC Bunkers &amp; Silos:</b> Introduces Janssen's and Airy's theories for pressure distribution and design of square, rectangular, and circular bunkers and silos.  |   |             |             | 6    |
| Unit 4  | <b>RC Chimneys:</b> self-weight, wind, and temperature-induced stresses, combined loading effects, and design of shaft and horizontal reinforcement.  |   |             |             | 6    |
| Unit 5  | <b>Cylindrical Shells:</b> Covers design principles, stress distribution, stability considerations, and practical design problems of cylindrical shells.  |   |             |             | 6    |

**Course Outcomes (COs):** - Upon successful completion of this course, the student will be able to:

BL

|     |   |   |
|-----|---|---|
| CO1 | Understand and derive governing differential equation for deflected shape of rectangular plates.                          | 1 |
| CO2 | Solve governing differential equation of deflected shape of rectangular plate for various loading and support conditions. | 3 |
| CO3 | Understand and derive governing differential equation for deflected shape of rectangular plates.                          | 2 |
| CO4 | Solve governing differential equation of deflected shape of rectangular plate for various loading and support conditions. | 3 |
| CO5 | Understand and derive governing differential equation for deflected shape of circular plates                              | 2 |
| CO6 | Understand membrane theory for internal forces in different shells.   | 2 |

### Course Content

| Unit No. | Contents   | Hrs. |
|----------|--|------|
| Unit 1   | <b>Introduction to Plate Theory:</b> Thin and Thick Plates, Small and Large Deflection Theory of Thin Plate, Assumptions in Analysis of Thin Plates, Slope Curvature Relations, Moment - Curvature Relations, Stress Resultants, Governing Differential Equations for Bending of Plates, Various Boundary Conditions | 6    |
| Unit 2   | <b>Navier's and Levy's Solution:</b> Analysis of Rectangular Plates Subjected to various loading, Navier's method of solution for simply supported plates, Leavy's method of Solution for plates under different boundary conditions.  | 6    |

(2025-27 Batch)

### Structural Health Monitoring and Audit

| Course Code and Course Title     | 0CEPEC554<br>Structural Health Monitoring and Audit   |                    |                      |                    |
|----------------------------------|---|--------------------|----------------------|--------------------|
| Semester                         | II  |                    |                      |                    |
| Prerequisites                    | Basic knowledge of structural analysis, design of concrete and steel structures, and civil engineering materials. |                    |                      |                    |
| Teaching Scheme (hours per week) | Lecture   | Tutorial           | Practical            |                    |
| Credit                           | 3   | -                  | -                    |                    |
| Evaluation Scheme                | ISE 1<br>10<br>Marks  | MSE<br>20<br>Marks | ISE 2<br>10<br>Marks | ESE<br>60<br>Marks |

**Course Outcomes (COs):** - Upon successful completion of this course, the student will be able to:

BL

|     |   |   |
|-----|---|---|
| CO1 | Apply knowledge of structural behavior to diagnose distress and identify influencing factors affecting performance.             | 3 |
| CO2 | Analyze structural health using static field-testing methods and interpret assessment data.                                     | 4 |
| CO3 | Analyze dynamic response data and assess health using vibration-based and remote sensing techniques.                            | 4 |
| CO4 | Evaluate and recommend suitable repair, strengthening, and rehabilitation strategies for distressed structures.                 | 5 |
| CO5 | Create smart monitoring solutions using advanced materials and sensor technologies for continuous structural health monitoring. | 6 |

### Course Content

| Unit No. | Contents  | Hrs. |
|----------|---|------|
| Unit 1   | <b>Introduction to Structural Health and Distress:</b> Overview of structural health concepts and parameters affecting performance. Major causes of distress such as design errors, material degradation, and environmental effects. Significance of durability, service life assessment, maintenance, and sustainability in preserving structural integrity. | 6    |
| Unit 2   | <b>Structural Health Monitoring:</b> Concept, importance, and basic methods of SHM. Visual inspection, NDT, and continuous monitoring approaches. Integration of SHM in design and operation phases. Applications in bridges, buildings, and heritage structures with focus on preventive maintenance.  | 6    |

Dr. V. T. Gaikwad  
HOD-Civil

Dr. K. K. Pandya  
Dean Academics

Dr. S. S. Mohite  
Director

Prof. R. A. Kanai  
Executive Director

|               |  |          |
|---------------|--|----------|
| <b>Unit 3</b> | <b>Structural Audit and Condition Assessment:</b> Principles and stages of structural audit—inspection, data collection, analysis, and reporting. Use of grading systems for condition evaluation. Investigation procedures for distress or collapse. Reference to IS codes and preparation of audit documentation       | <b>6</b> |
| <b>Unit 4</b> | <b>Static Field Testing and Instrumentation:</b> Fundamentals of static testing and load assessment. Basic loading arrangements, use of strain gauges, displacement and crack measurement tools. Data acquisition and comparison with analytical models for validation and safety assessment.                            | <b>6</b> |
| <b>Unit 5</b> | <b>Dynamic Field Testing and Smart Monitoring:</b> Concepts of dynamic testing, vibration analysis, and modal studies. Overview of ambient and forced vibration tests. Introduction to remote sensing, wireless sensors, and data acquisition systems for real-time health monitoring.                                   | <b>6</b> |
| <b>Unit 6</b> | <b>Repairs, Rehabilitation, and Smart Materials:</b> Essential repair and retrofitting techniques including jacketing and FRP wrapping. Brief case examples of rehabilitation practices. Introduction to piezoelectric and EMI-based smart sensing materials. Emphasis on sustainable and performance-based maintenance. | <b>6</b> |

Laboratory / Field Component (NEP 2020 Suggested): Mini-project on structural audit or SHM study; demonstration of NDT tools and sensors; data collection, interpretation, and short report on rehabilitation measures.

|                    |           |

**Course Outcomes (COs):** -Upon successful completion of this course, the student will able to:

BL

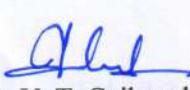

**CO1** Select suitable advanced materials for specific engineering applications. **5**

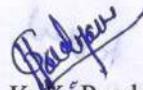

**CO2** Integrate sustainability and smart technology into material design. **4**

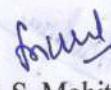

**CO3** Conduct laboratory and field-level assessment of new materials **4**

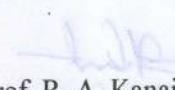

### Course Content

| Unit No. | Contents  | Hrs. |
|----------|---|------|
| Unit 1   | <b>Sustainable and Green Construction Materials</b><br>Principles of sustainable materials design and life-cycle analysis (LCA), Use of industrial by-products: fly ash, GGBS, red mud, rice husk ash, Alkali-activated binders and geopolymers concrete, Recycled aggregates, construction and demolition (C&D) waste utilization, Low-carbon cements and carbon capture in construction materials, Introduction to advanced concretes-High Strength concrete, High performance concrete, Fibre reinforced concrete, Self-compacting concrete. | 6    |
| Unit 2   | <b>Smart and Functional Materials</b><br>Smart materials in civil engineering: overview and types, Self-sensing, self-healing, and self-cleaning materials, Photo catalytic concrete and hydrophobic coatings, Shape memory alloys and their structural applications, Embedded sensors and smart concrete systems for structural health monitoring (SHM).   | 6    |
| Unit 3   | <b>Advanced Metallic, Polymeric, and Composite Materials</b><br>High-performance steel and aluminium alloys in construction, Corrosion-resistant and weathering steels, Advanced polymers and FRP composites: manufacturing, mechanical behaviour, and field applications, Nano-materials and Nano-modified composites, Hybrid composites and sandwich panels for lightweight structures.   | 6    |

**Course Outcomes (CO's):** - Upon successful completion of this course, the student will be able to:

BL

|             |   |   |
|-------------|---|---|
| <b>CO 1</b> | Explain the fundamental concepts of optimization and formulate engineering problems as mathematical programming models.           | 2 |
| <b>CO 2</b> | Apply classical and linear programming techniques to solve single and multivariable structural optimization problems.             | 3 |
| <b>CO 3</b> | Utilize non-linear and constrained optimization methods to analyse and optimize structural systems.                               | 4 |
| <b>CO4</b>  | Employ advanced optimization techniques such as geometric and dynamic programming for solving complex structural design problems. | 5 |

| Course Content   | Hrs |
|--|-----|
| <b>Unit 1</b><br>Introduction to optimization, engineering applications of optimization, Formulation of structural optimization problems as programming problems. Optimization Techniques: Classical optimization techniques, single variable optimization, multivariable optimization with no constraints, unconstrained minimization techniques and algorithms constrained optimization solutions by penalty function techniques, Lagrange multipliers techniques and feasibility techniques | 08  |
| <b>Unit 2</b><br>Linear Programming: Linear programming, standard form of linear programming, geometry of linear programming problems, solution of a system of linear simultaneous equations, pivotal production of general systems of equations, simplex algorithms, revised simplex methods, duality in linear programming.  | 06  |

|                    |  |           |
|--------------------|--|-----------|
| <b>Unit 3</b>      | Construction Site Safety Management<br>Safety in formwork, scaffolding, concreting, and erection. Lifting operations and material handling safety. Working at heights, excavation safety, confined space safety. PPE (Personal Protective Equipment) and safety signage. Site layout and traffic management for safe operation.  | <b>06</b> |
| <b>Unit 4</b>      | Risk Assessment and Safety Systems<br>Risk identification, evaluation, and control hierarchy. Techniques: Job Safety Analysis (JSA), FMEA, HAZOP, Fault Tree Analysis. Safety management systems: OHSAS 18001, ISO 45001. Accident investigation and root cause analysis. Documentation, inspection, and safety audit procedures.  | <b>06</b> |
| <b>Unit 5</b>      | Legal Framework, Standards, and Regulations<br>Indian Factories Act, BOCW Act, and Contract Labour Act. BIS codes for construction safety (IS 3764, IS 7205, IS 7293, IS 14687). OSHA and ILO guidelines. Safety certification, statutory approvals, and reporting procedures. Roles and responsibilities of engineers, contractors, and clients.  | <b>06</b> |
| <b>Unit 6</b>      | Emerging Technologies & Sustainable Safety Practices<br>Digital safety management using BIM, drones, IoT, and AI. Monitoring and predictive analytics for accident prevention. Disaster preparedness, emergency response, and evacuation planning. Ethical and sustainable aspects of safety in design and construction. Case studies on innovative safety practices in structural projects. | <b>06</b> |
| <b>Total Hours</b> |  | <b>36</b> |

**Course Outcomes (COs):** - Upon successful completion of this course, the student will be able to: **BL**

|             |  |          |
|-------------|--|----------|
| <b>CO1</b>  | Identify relevant research problems in structural engineering through literature review  | <b>4</b> |
| <b>CO2</b>  | Formulate clear and concise objectives   | <b>5</b> |
| <b>CO 3</b> | Analyze structural engineering problems using appropriate tools and techniques           | <b>4</b> |
| <b>CO 4</b> | Validate the results of research work from literature by principle of replication        | <b>5</b> |
| <b>CO5</b>  | Prepare a detailed technical report and present project findings clearly and confidently | <b>5</b> |

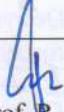

### Course Content

|  |  |
|--|--|
| <b>Note:</b><br>The 'Mini Project' course offers students an opportunity to explore advanced topics in structural engineering. Students choose a topic in consultation with their supervisor, focusing on dissertation work, societal problems, or special structures using standard software. The students should apply any tool such as software, mathematical method, and development of programming, experimental method or solving selected problem. Here parametric study is not expected. This course emphasizes practical application, fostering skills such as problem identification, report preparation, and effective communication. Students are expected to develop lifelong learning abilities and deliver presentations, showcasing their findings. A comprehensive report must be submitted to the Department Post Graduate Committee in both hard and soft copy formats. |  |

### Project Management & Strategic Planning

| Course Code and Course Title | 0CCEEM558<br><b>Project Management &amp; Strategic Planning</b>    |             |                 |                  |
|------------------------------|--|-------------|-----------------|------------------|
| Prerequisites                | Basics of Management, Engineering Economics, Operations Management |             |                 |                  |
| Teaching Scheme              | <b>Lecture</b>   |             | <b>Tutorial</b> | <b>Practical</b> |
|                              | 3  |             | -               | -                |
| Credits                      | <b>03</b>  |             |                 |                  |
| Evaluation Scheme            | <b>ISE 1</b>   | <b>MSE</b>  | <b>ISE 2</b>    | <b>ESE</b>       |
|                              | 10<br>Marks  | 20<br>Marks | 10<br>Marks     | 60<br>Marks      |

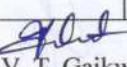

#### Course Outcomes (CO)

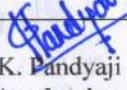

Upon successful completion of this course, the student will be able to:

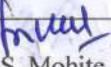

|            |   |          |
|------------|---|----------|
| <b>CO1</b> | <b>Apply</b> principles of project management, life cycle, and project organization.  | <b>3</b> |
| <b>CO2</b> | <b>Apply</b> project planning, scheduling, resource allocation, and cost estimation techniques.   | <b>3</b> |
| <b>CO3</b> | <b>Analyze</b> project risks, quality, and performance metrics for effective decision-making.   | <b>4</b> |
| <b>CO4</b> | <b>Demonstrate</b> knowledge of strategic planning, portfolio management, and project alignment with business objectives.               | <b>3</b> |
| <b>CO5</b> | <b>Design</b> project management frameworks for real-world engineering and industrial projects, ensuring sustainability and efficiency. | <b>5</b> |

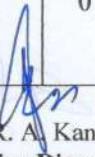

#### Course Contents

| Unit No       | Contents  | Hrs |
|---------------|---|-----|
| <b>Unit 1</b> | <b>Fundamentals of Project Management</b><br>Introduction to projects and project management, project life cycle, roles and responsibilities, project organization structures, project objectives and scope, project selection methods.     | 07  |
| <b>Unit 2</b> | <b>Project Planning and Scheduling</b><br>Work Breakdown Structure (WBS), Gantt charts, Critical Path Method (CPM), Program Evaluation and Review Technique (PERT), resource allocation, cost estimation, budgeting.                        | 06  |
| <b>Unit 3</b> | <b>Project Risk Management</b><br>Risk identification, risk assessment methods, qualitative and quantitative risk analysis, risk mitigation strategies, contingency planning.   | 06  |
| <b>Unit 4</b> | <b>Project Quality and Performance Management</b><br>Quality management principles, Six Sigma, Total Quality Management (TQM), Key Performance Indicators (KPIs), Earned Value Management (EVM), project monitoring and control techniques. | 07  |

|   | 50 Marks                        |                 | 50 Marks         |

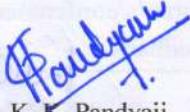

**Course Outcomes (COs):** - Upon successful completion of this course, the student will be able to: **BL**

|             |  |          |
|-------------|--|----------|
| <b>CO1</b>  | Execute a complete structural engineering project independently.       | <b>6</b> |
| <b>CO2</b>  | Apply advanced tools and techniques in structural design and analysis. | <b>4</b> |
| <b>CO 3</b> | Present results in a standard technical/research format.               | <b>5</b> |
| <b>CO 4</b> | Develop skills required for industry or doctoral research.             | <b>5</b> |

### Course Content

|   |  |
|---|--|
| <b>Note:</b><br>Students should work independently or in collaboration with design firms, construction companies, or research institutions on real-life problems related to structural analysis, design, testing, or optimization. The internship involves detailed study, data collection, structural modelling, and analysis using advanced tools such as ETABS, STAAD. Ro, ANSYS, or ABAQUS. Topics may include finite element modelling, seismic and wind analysis, bridge or high-rise design, retrofitting, or sustainable construction materials. Students are required to maintain a daily or weekly logbook, prepare a comprehensive technical report or dissertation, and present their findings before an internal and external evaluation committee. The focus is on developing technical competence, analytical thinking, research aptitude, and professional presentation skills. |  |
